DETAILED ACTION

Priority

Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.

Allowable Subject Matter

Claims 1-20 are allowed.

The following is an examiner's statement of reasons for allowance:

The prior art does not teach or suggest an imaging lens having, in order from the object side, a first lens component of negative refractive power, having an aspheric surface on the image side that is concave near the optical axis, and having an aspheric surface on the object side; a second lens component of positive refractive power and having a convex surface on the object side; a third lens component of positive refractive power and that includes, in order from the object side, a lens element of positive refractive power and a lens element of negative refractive power; a fourth lens component having a surface on the object side that is convex near the optical axis, and having an aspheric surface on the image side that is convex near the optical axis and that becomes concave at the periphery as well as satisfying the recited numerical limitations.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Matsusaka, Noda, Yamada and Ozaki are all cited to show other imaging lens systems have some similar structure, but do not have all of the recited structure as well as meeting the recited numerical conditions.
